

FDOT ETL: Financial Data Operations Tool - Extract Transform Load

The Financial Data Operations Tool (FDOT) ETL Tool is a fully automatic, flexible and externally configurable programme that exports/imports data from/into the PMS dataset.

Product Information

Data Integration and Data Export

Key Benefits

- ◇ Automatic import of data in PMS via standard import interface for further processing
- ◇ Supports various input formats (such as XML, CSV, Excel)
- ◇ Exports data from the PMS dataset to other formats (e.g. XML, CSV)
- ◇ Input files can be obtained automatically via S/FTP for example
- ◇ Uses firmware, which allows for adjustments without exchanging the software components
- ◇ State-of-the-art configurability ensures high flexibility
- ◇ Retrieves market data from IHS Markit via HTTP Post
- ◇ Detailed logs ensure traceability
- ◇ Very good integration in existing customer processes

The FDOT ETL Tool is able to read different file formats (like XML, CSV and also Excel for example) and to import them in the PMS dataset via standard import interface.

Apart from that, the tool can also be used to export data from the PMS dataset to other file formats for further use in a subsequent system.

PMS database tables or complex SQL statements serve as a basis.

All input data can be obtained locally, from the intranet or internet (via S/FTP for example).

FDOT ETL additionally supports the retrieval of market data from IHS Markit via HTTP Post (like e.g. credit spread curves).
